PREFACE

Producing policies that will shape the development is possible, as the first priority, by stating the socio-economic picture of the countries/regions in both quantitative and qualitative way. The importance of the dissemination where statistics and indicators are intensively used is increasing more and more so as to follow the developments in time and provide comparisons.

Nowadays, facilitating the comprehension and disseminating of the correct usage of the information is of great importance. In this vein, with “Bursa Key Figures” publication Bursa Eskisehir Bilecik Development Agency (BEBKA) aims to present summarized indicators and statistics describing Bursa in more understandable and easily trackable way.

By this work, BEBKA has targeted to make people in Bursa to be more acquainted with the province including its inner dynamics and to provide comparison of Bursa on Turkey scale. We hope that such new work for Bursa will be beneficial to all users.

OLD AGE DEPENDENCY RATIO

—■ Bursa —■ Turkey

YOUNG AGE DEPENDENCY RATIO

The age structure of a population is a factor that affects socio economic issues. Old and young dependency indicators represent how much the population aged under the age of 15 and over the age of 65 are dependent on working age population. According to these indicators, policy choices like investments to schools for young people and to health for elderly people are arising.

During the years between 2010 and 2015, the old age dependency ratio is rising, whereas the young age dependency ratio is declining. The old age dependency ratio of Bursa is parallel with the Turkey's average; the young age dependency ratio is below the national average.

DEFINITIONS

Infant Mortality Rate: It is the number of deaths of infants under one year of age per 1000 live births in a given year.

Youth Age Dependency Ratio: The number of people in the age group of 0-14 per 100 people in the 15-64 age group.

Broadband Internet Penetration: The ratio of the number of internet subscriptions to the total population of the province.

Employment Rate: It is the ratio of employed people to the non-institutional working age population.

Labor Force Participation Rate: It is the ratio of the labor force to non-institutional working age population.

Unemployment Rate: The ratio of unemployed people to labor force.

Crude Birth Rate: the number of live births per 1000 population in given year.

Net Migration Rate: It is the number of net migration (the difference between immigration and emigration) per thousand people who are able to migrate.

Net Enrollment Rate: It is obtained by dividing the number of students of the theoretical age group enrolled in a specific level of education by the population in that age group.

Population Growth Rate: It is the population increase per 1000 population per year in between two years.

Literacy Rate: It is the number of people who can both read and write divided by the total population.

Median Age: The age of person in the middle when all the people in the population are ranked in ascending order.

Old Age Dependency Ratio: The number of people at the age 65 and over per 100 people in the 15-64 age group.
